

ABSTRACT

Disclosed is a bibcock for washbasin, which has a control lever, for regulating the amount of hot and cold water supplied, mounted at the lower body of a discharge pipe for discharging hot and cold water, thereby allowing a user to clean the control lever conveniently and to use it sanitarily. The bibcock for washbasin includes: a body of a predetermined height mounted at the upper end of a washbasin for being supplied with hot and cold water, the body having a valve therein; a discharge pipe extending from the body to the front side and having a outlet formed at an end thereof for hot and cold water supply; and a control lever mounted at the front side of the lower body of the discharge pipe and connected with the valve for regulating the amount of hot and cold water supplied.
